Client reports recent ED/hospital discharge for confirmed or probable COVID-19

- No
- Yes

Symptoms fever, cough, shortness of breath, chills, or muscle aches*

- No
- Yes

Provide Client Mask

Recommend isolation

- Client refusal: deny entry to shelter
- Per EPCPH: Homeless isolation shelter
- Hotel room
- Private room at shelter

Severe symptoms**

- No
- Yes

Call EMS for transport to ED. Inform EMS/ED regarding suspected Covid-19 case

COVID-19 has been declared a public health emergency. Isolation of symptomatic individuals is the primary way to decrease the spread of COVID-19.

As people experiencing homelessness need a safe space in which to isolate, we are establishing a homeless isolation shelter as a “Home for the Homeless”. This is a safe space where mildly symptomatic individuals can isolate and recover from COVID-19.

IF YOU IDENTIFY A CLIENT FOR ISOLATION:

1. CALL FOR MEDICAL CONFIRMATION
2. CALL SHELTER MANAGER FOR HAND-OFF
3. CALL ENVIDA FOR TRANSPORT

Due to limitations in testing, only patients admitted to the hospital will undergo COVID-19 testing; patients with symptoms consistent with COVID-19 are considered “probable positive” and are recommended to self-isolate while waiting for symptom resolution. EPCH advises that 80% of patients with known or "probable positive" COVID-19 can care for themselves at home.
