

Functional Zero Definitions First Principles:

End state definitions must have the following attributes:

- Dynamic end zone
- Objectively measurable across contexts, understanding
 - The need to bring standardization & objectivity AND
 - Context matters (can't be totally open ended)
- Simple and easily assessed to enable actionable data for improvement
 - Replicable
- Credible with critical stakeholders in and across communities, including people with lived experience, community leads and teams, adjacent system stakeholders, and the general public
